1 Preliminary note

Technical data, approvals, accessories and further information at www.ifm.com.

1.1 Symbols and warnings used

- ▶ Instructions
- > Reaction, result
- [...] Designation of keys, buttons or indications
- Cross-reference

Important note

Non-compliance may result in malfunction or interference.

Information

Supplementary note.

1.2 Warnings used

WARNING!

Warning of serious personal injury. Death or serious irreversible injuries may result.

CAUTION!

Warning of personal injury.
Slight reversible injuries may result.

ATTENTION!

Warning of damage to property

2 Safety instructions

- The described unit is a subcomponent to be integrated into a system. The builder of the system is responsible for the safety of the system. It is the system builder's responsibility to perform a risk assessment and to draft a documentation, in accordance with legislation and standard requirements, to be provided to the system operator and the system user. The documentation must contain all information and safety instructions required by the operator, the user and, if applicable, by any service personnel authorised by the builder of the system.
- Read this document before setting up the product and keep it during the entire service life.
- The product must be suitable for the corresponding applications and environmental conditions without any restrictions.
- Only use the product for its intended purpose (→ 3 Functions and features).
- If the operating instructions or the technical data are not adhered to, personal injury and/or damage to property may occur.
- In case of malfunctions of the unit, please contact the manufacturer. Tampering with the unit is not allowed.
- Installation, electrical connection, set-up, programming, configuration, operation and maintenance of the product must be carried out by personnel qualified and authorised for the respective activity.
- Protect units and cables against damage.

3 Functions and features

3.1 Block diagram

Inputs/outputs of the device

3.2 General application and functionality

The device is used for the control of a connected actuator or another device with analogue input (4...20 mA). It is not suited for environments with particular requirements on mechanical stability (e.g. shock/vibration). The device has two analogue current outputs.

The device is intended for indoor use only.

Observe the operating conditions (→ 11 Technical data).

The device works as an "IO-Link / analogue converter".

The current values to be provided are set via IO-Link communication with IO-Link tools or a PLC.

3.3 Application as an IO-Link device

3.3.1 General information

The device has an IO-Link communication interface which requires an IO-Link-capable module (IO-Link master).

The IO-Link interface allows direct access to the process and diagnostic data and enables setting of the parameters of the unit during operation.

You will find further information about IO-Link and all necessary information about the required IO-Link hardware and software at:

www.ifm.com/gb/io-link.

UK

Application example with IO-Link master

- | | |
|--|--|
| 1: Analogue actuator | 4: IO-Link masters |
| 2: Converter IO-Link / 2 x 4...20 mA | 5: Fieldbus (e.g. Profibus, Profinet etc.) |
| 3: Fully bidirectional IO-Link communication
- Remote parameter setting: reading and
changing the parameter setting. | 6: PLC |

3.3.2 IO Device Description (IODD)

You will find the IODDs necessary for the configuration of the IO-Link device and detailed information about process data structure, diagnostic information and parameter addresses at:

www.ifm.com

4 Operating and display elements

1: LEDs

4.1 LEDs

LED		Colour	Status	Description
I	OUT1	yellow	on	Analogue value in the standard range: 0...100 % (4...20 mA)
			flashing (2 Hz)	Analogue value in the range: -10...0 %, 100...110 % (2...4 mA, 20...22 mA)
			flashing (5 Hz)	Interruption of the current loop
			off	Analogue value off: < -10 % (< 2 mA)
Power		green	on	Voltage supply OK. Device in operating mode.
			flashing (5 Hz)	Device supply undervoltage
			off	Voltage supply off.
II	OUT2	yellow	on	Analogue value in the standard range: 0...100 % (4...20 mA)
			flashing (2 Hz)	Analogue value in the range: -10...0 %, 100...110 % (2...4 mA, 20...22 mA)
			flashing (5 Hz)	Interruption of the current loop
			off	Analogue value off: < -10 % (< 2 mA)

UK

Error signals and diagnostics (→ 12 Fault correction)

4.1.1 Diagram of the current value on the output

5 Installation

The M12 connecting parts must not be mechanically stressed when in use in the application. Depending on the operating conditions the device is also to be protected against mechanical stress (shock/vibration). If required, the device can be fixed with a mounting clip.

Mounting clip (fasten with M4 screw or cable ties)

Mounting clip with display attached

The mounting clip is not supplied with the device.

More information about the available accessories at:
www.ifm.com

6 Electrical connection

The device must be connected by a qualified electrician: The national and international regulations for the installation of electrical equipment must be adhered to. Voltage supply to SELV, PELV.

▶ Protected circuits

Potential	M12 connector ①	Circuit breaker
L+ / supply voltage	Pin 1	≤ 2 A
C/Q IO-Link (if not protected via IO-Link master)	Pin 4	≤ 2 A

Required tripping characteristic of the fuses:

$$T_{\text{fuse}} \leq 120 \text{ s at max. } 6.25 \text{ A (fire protection)}$$

- ▶ Alternatively supply the device via a limited energy circuit according to IEC 61010-1 or class 2 according to UL1310.

UK

CAUTION!

Input current is not limited.

- > No fire protection
- ▶ Protected circuits

- ▶ Disconnect power.
- ▶ Connect the device according to the table below.

Pin	4-pole M12 connector ①
1	L+ / supply voltage
2	not connected
3	L- / supply voltage
4	C/Q IO-Link

Pin	5-pole M12 socket ②
1	L+
2	4...20 mA analogue output 2
3	L-
4	4...20 mA analogue output 1
5	not connected

- 1: Input side
- 2: Output side

There must not be any external supply to the device on the 5-pole M12 output socket ②.

Always use the intended connection cables to connect other devices to the converter.

See also application examples (→ 3 Functions and features)

To ensure the protection rating fully tighten the M12 connectors. Protection rating (→ 11 Technical data).

- ▶ Make the connection as required to the device (arrow shows the position of the coding).
- ▶ Tighten coupling nut.
Tightening torque: min. 0.6 Nm (tightening by hand), max. 1.5 Nm (using a torque wrench)
- ▶ For demounting loosen the coupling nut and simultaneously press the connector against the device.
- ▶ If used in harsh environments, further tighten the coupling nut by another notch using a torque wrench (across the flats 14).

6.1 Maximum length of the connection cables

With IO-link communication on the master side: 20 m.

All cables must be provided with a strain relief approx. 200 mm behind the connectors.

7 Operation

The device provides the output signals according to the process data set via IO-Link.

8 Parameters

8.1 Parameters via IO-Link

8.1.1 Application-specific tag

Customer-specific application description, max. 32 characters long.

Value: “ *** ” / can be freely defined by the customer

9 Parameter setting

During parameter setting the device remains in the operating mode. It continues its monitoring functions with the existing parameters until the parameter setting has been completed.

10 Scale drawing

Dimensions [mm]

11 Technical data

Operating voltage DC	[V]	18...30
Nominal voltage DC	[V]	24
Current consumption	[mA]	300
Number of analogue outputs		2
Analogue output current		4..20 mA
Extended current range		0..22 mA
Max. load analogue output	[Ω]	300
Accuracy	[% FS]	0.25
Protection rating		IP 67
Ambient temperature	[°C]	-25...70
Storage temperature	[°C]	-25...70
Max. permissible relative air humidity	[%]	90 (31 °C) linearly decreasing to 50 (40 °C) non condensing
Maximum operating altitude	[m]	4000 above sea level
Connectors		M12 connector, 4 poles M12 socket, 5 poles

*) With threaded M12 connectors tightened as described
(→ 6 Electrical connection)

11.1 IO-Link device

Transmission type		COM2 (38.4 kbaud)
IO-Link revision		1.1
SDCI standard		IEC 61131-9
IO-Link device ID		612 d / 00 02 64 h
SIO mode		no
Required master port type		A/B
Process data analogue		OUT: 2
Process data binary		0
Min. process cycle time	[ms]	5.6

11.2 Approvals/standards

EC declarations of conformity, approvals etc. can be downloaded at:
www.ifm.com

12 Fault correction

LED	Status	Error	Fault correction
I	flashing (5 Hz)	interruption of the current loop	Check/correct connection cables and connections on the input (→ 6).
Power	flashing (5 Hz)	supply voltage too low	Check/correct the supply voltage (→ 6) and (→ 11).
	off	no supply voltage	Check/correct the supply voltage (→ 6) and (→ 11).
II	flashing (5 Hz)	interruption of the current loop	Check/correct connection cables and connections on the input (→ 6).

UK

13 Maintenance, repair, disposal

13.1 Maintenance

The unit is maintenance-free.

13.2 Cleaning the housing surface

- ▶ Disconnect the unit.
- ▶ Clean the unit from dirt using a soft, chemically untreated and dry cloth.

Micro-fibre cloths without chemical additives are recommended.

13.3 Repair

The device must only be repaired by the manufacturer.

- ▶ Observe the safety instructions.

13.4 Disposal

- ▶ Dispose of the device in accordance with the national environmental regulations.
