- Laser class 1
- The laser light scanner, based on the principle of light propagation time measurement, makes a large detection range and universal application possible
- Design with infrared light and visible red light
- Sensor performance allows reliable detection of both glossy and less-reflective objects at extreme angles
- Automatic reserve and hysteresis ensure reliable switching behavior
- Extremely simple operation, teachable switching points
- Pilot beam can be activated for alignment (infrared sensors)
- Time lock prevents unintentional changing of the switching points
- Optimized for positioning applications and reliable object detection (e.g. compartment occupation check, shelf positioning, feed-through monitoring)

Electrical connection

Pin 5 = analog output
4-20mA

Remarks

- Setting the switching points:
Align sensor with object.
Q1: Press teach button 1 for approx 2s,
Q2: Press teach button 2 for approx 2s,
release each when the LED starts flashing, teach in of switching point complete.
The object has been detected when the respective Q1/Q2 indicator lights up.¹¹⁾
- Reserve: For the reliable detection of objects with low reflectance, a reserve is automatically added during the teach event. This is constant over the entire teach range.
Object is detected:
distance to sensor ≤ teach point + reserve
- Hysteresis: To ensure continuous object detection in the switching point, the sensor has a switch-off hysteresis.
Object is no longer detected if:
distance to sensor > teach-in point + reserve + hysteresis.
- Factory setting:
reserve: approx. 50mm
hysteresis: approx. 50mm
- With the set scanning range, a tolerance of the upper scanning range limit is possible depending on the reflection properties of the material surface.
- Scanning range/reflectivity:

Object/diffuse reflection	
6 ... 90%	0.15 ... 6m (standard)

Pilot laser (alignment)

Activation:
Hold Q1 teach button
down < 1.5 s

Deactivation:
Hold Q1 teach button
down < 1.5 s

The pilot laser (red light) of the infrared devices is used exclusively as an alignment aid.
The beam radiates at a distance of 17 mm parallel to the infrared laser beam (see dimensioned drawing).
