Note

Factory setting: **light switching, time module not active**

Light/dark switching

Setting the switching behavior of the relay output

Teach level 1	<p>Press teach button (2 to 7s) until both LEDs (green/yellow) flash synchronously. Release teach button – switchover is complete.</p> <p>The yellow LED then indicates the current setting of the switching output for 3s:</p> <p>ON = light switching = output between pin 4 and pin 3: normally closed contact (NC) output between pin 4 and pin 5: normally open contact (NO)</p> <p>OFF = dark switching = output between pin 4 and pin 3: normally open contact (NO) output between pin 4 and pin 5: normally closed contact (NC)</p>	<p>2 ... 7s</p> 
----------------------	---	---

Activation/deactivation of the time module

Setting a dropout delay for the relay output

Teach level 2	<p>Press teach button (7 to 12s) until both LEDs (green/yellow) flash alternately. Release teach button – activation/deactivation is complete.</p> <p>The yellow LED then indicates the current setting of the dropout delay for 3s:</p> <p>ON = time module not active = no dropout delay for the relay</p> <p>OFF = time module active = dropout delay for the relay: 500ms ¹⁾</p> <p><small>1) Additional models on request</small></p>	<p>7 ... 12s</p> 
----------------------	---	--

Dropout delay: if the object is no longer present, the output switches with a time delay.
