

Features

- Limit switch for liquids in the food sector
- External function test with test magnet
- Onsite function check possible thanks to LED indication
- Large selection of process connections for hassle-free installation in existing systems
- Easy to install even at points difficult to access due to compact design
- Rugged stainless steel housing
- Suitable for process temperatures up to 150 °C (302 °F)
- Cost-saving plug connections
- Approval as overflow protection and leak detection system acc. to WHG

Function

The Vibracon LVL-A7H is a limit switch for universal use in all liquids. It is used preferably in storage tanks, mixing vessels and pipes, where the internal and external hygiene requirements are particularly stringent.

The device is suitable for applications in which float switches or conductive, capacitance and optical sensors have been used up to now. The device also works in areas where these measuring principles are not suitable due to conductivity, buildup, turbulence, flow conditions or air bubbles.

The device can be used for process temperatures up to:

- 100 °C (212 °F), CIP capable
- 150 °C (302 °F), CIP and SIP capable
- CIP = Cleaning in Place, SIP = Sterilization in Place

The device is not suitable for use in hazardous areas.

Assembly

- 1 Compact version with valve plug
- 2 Short tube version with cable
- 3 Compact version with M12 plug for housing cover IP66/68/69K
- 4 Short tube version with M12 plug for housing cover IP65/67

Further device versions see technical information (TI).

Connection

Example: electrical connection with M12 plug
Further electrical connections see technical information (TI).

General specifications		
Measuring method		The tuning fork is brought to its resonance frequency by means of a piezoelectric drive. If the tuning fork is covered by liquid, this frequency changes. The electronics monitor the resonance frequency and indicate whether the tuning fork is freely vibrating or is covered by liquid.
Construction type		compact device device with short tube
Operating mode		MAX = maximum safety: The device keeps the electronic switch closed as long as the liquid level is below the fork. example application: overspill protection MIN = minimum safety: The device keeps the electronic switch closed as long as the fork is immersed in liquid. example application: dry running protection of pumps The electronic switch opens if the limit is reached, if a fault occurs or in the event of a power fails (quiescent current principle)
Supply		
Rated voltage	U_n	- DC-PNP: 10 ... 35 V DC, 3-wire - AC/DC: 20 ... 253 V AC/DC, 2-wire

Mounting position

The device can be installed in any position in a vessel, pipe or tank. Foam formation does not affect the function.

- 1 Overfill prevention or upper level detection
- 2 Lower level detection
- 3 Dry running protection for pump

Switch Point

The switch point (A) on the sensor depends on the orientation of the limit switch (water +25 °C (+77 °F), 1 bar (14.5 psi)).

Vertical and horizontal orientation, dimensions in mm (inch)
