## THROUGH BEAM

In this model the light emission is infrared and the signal is robust over long ranges. The emitter (S100...G00) and the receiver are provided in the same package and with a unique order number.

	max. operating distance
NO SLIT	12 m
2 mm SLIT	6,7 m
1 mm SLIT	3,2 m
0,5 mm SLIT	2 m

## SLIT EFFICIENCY

The use of the rectangular SLIT (0,5/1/2 mm x 19 mm), available as accessory, allows to reduce the power and the openness of the light beam, in order to avoid optical interference between adjacent sensors and to narrow the light beam facilitating the detection of smaller objects.

## RETROREFLECTIVE (infrared)

The model is not equipped with a polarization filter and thanks to the Infrared light emission is able to pass through a transparent protective screen without detect it. The reflector is not included with the product.

	max. operating distance	
	with R5 reflector	with R2 reflector
NO SLIT	8,3 m	7,3 m
2 mm SLIT	5,6 m	4,2 m
1 mm SLIT	3,3 m	2,8 m

R6	rectangular (36x55 mm)	0,01..7 m
RT3970	self-adhesive tape (60x40 mm)	0,05..2 m

## POLARIZED RETROREFLECTIVE

The model is equipped with a polarization filter to avoid false switching due to reflective objects. The absence of the trimmer is compensated by the availability of two different models:

- a short range model, suggested for the conveyor belts and applications with small detection area, especially in the detection of *critical materials* (shiny packages, reflective surfaces, metallic parts, glossy plastic objects, ceramic tiles)
- a long range model, usable in generic applications and for long distance object detections

The SLIT accessory is available with three different aperture dimensions to further reduce the emission power and to narrow the light beam.

The reflector is not included with the product.

REFLECTOR	TYPE	SHORT RANGE (S100-...-B0)	LONG RANGE (S100-...-B1)
R1	circular (23 mm)	0,1..0,8 m	0,02..2 m
R2	circular (48 mm)	0,03..2 m	0,01..4,5 m

## DIFFUSE PROXIMITY

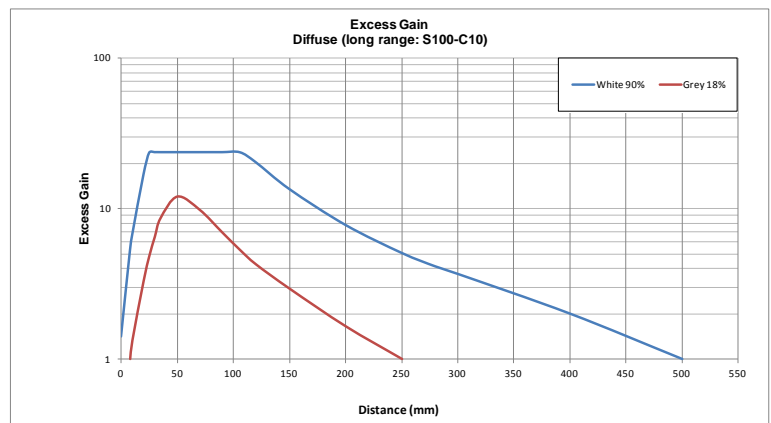

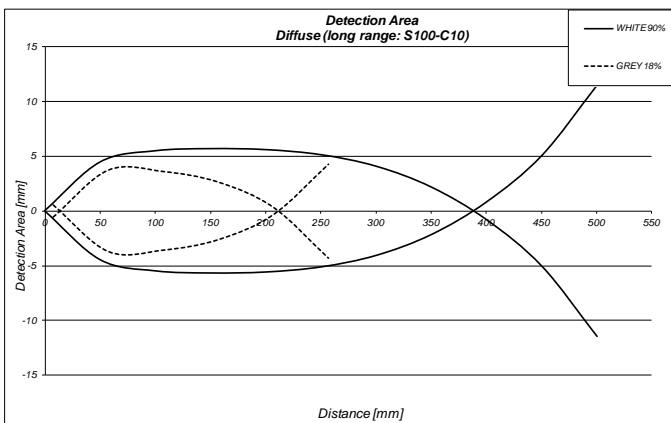

The Diffuse proximity model is available in two versions: a short range version, able to detect opaque objects up to 300 mm and a long range version with 500 mm operating distance. The high ambient light immunity of these models allows to use the sensor even in presence of fluorescent and stroboscopic lamps.

	SHORT RANGE (S100-...-C0)	LONG RANGE (S100-...-C1)
Recommended operating distance (on White 90% target)	10...240 mm	2...400 mm
Maximum operating distance (White 90% target)	1...300 mm	0...500 mm

Difference White-Grey	50%	50%
Difference White-Black	75%	75%
Hysteresis	20%	20%

### DIFFUSE (SHORT RANGE: S100-C00)

### DIFFUSE (LONG RANGE: S100-C10)

## FIXED FOCUS

The Fixed focus model can detect opaque objects with very high efficiency and independence from the colors in a restricted area, with 70 mm focal point, without detecting anything outside of this limit. The installation is simple thanks to the visible red light spot.

Focus point	70 mm
Maximum operating distance (White 90%)	70 mm
Maximum operating distance (Grey 18%)	55 mm
Difference White/Black	25%

## BACKGROUND SUPPRESSION

### EXTERNAL TEACH-IN

By the remote input (white wire/pin 2) it is possible to set the sensor in order to suppress a specific background and/or to detect specific objects following the easy procedure:

### OBJECT AT FIXED DISTANCE

Point the sensor towards the object and connect the white wire/pin 2 to +Vdc for 1 s.

The sensor is able to detect only the object at this fixed distance ignoring anything outside this distance

### BACKGROUND SUPPRESSION

Point the sensor towards the background to suppress it and connect the white wire/pin 2 to +Vdc for 3 s.

The sensor is able to detect every object passing through the area between the active face and the background ignoring its reflections

### LIGHT/DARK SELECTION

The factory default for this model is in LIGHT mode (N.O. output). Connecting the white wire/pin 2 to +Vdc for 7 s the operating mode is inverted in DARK (N.C. output)

Operating distances (background suppression)	30...100 mm
Maximum operating distance (White 90%)	0...150 mm
Maximum operating distance (Grey 18%)	4...110 mm
Maximum operating distance (Black 6%)	5...80 mm
Difference White 90%/White 90%	< 5%
Difference White 90%/Grey 18%	< 15%
Difference White 90%/Black 6%	< 25%

## M18 ADAPTER "NOSE"

The patented ST-S3Z-M18 accessory allows to adapt the miniature sensor S100 to a M18 tubular mounting. It can be principally use with through beam and retroreflective models fixing the sensor in the proper holes as indicated on the accessory housing. It slightly affects the optic system narrowing the detection beam without changing the operating distance.
